

Figure 4.10 Simulated and observed monthly precipitation totals (in mm per month) for regional climate simulations for January 1993 (panels a and b) and July 1993 (panels c and d). The observations in (b) and (d) are from a surface-based network of approximately 1,400 rain gauges covering a part of the computational domain (Note there are no observations in the white areas.) After Lüthi et al. (1996).
